

EDUCATION

Resin Flooring Solutions

Flooring for educational establishments needs to be hardwearing, easy to maintain and visually attractive.

It also needs to be hygienic and durable enough to withstand the test of time without the need for frequent, disruptive and costly repairs.

Resin flooring systems provide a sustainable solution by offering superior durability. This translates into greater longevity, resulting in lower maintenance costs. Resin flooring finishes have now started to become a more popular flooring option for schools and other educational establishments based on the benefits they can provide.

TYPICAL INSTALLATION AREAS:

MINIMAL DOWNTIME & DISRUPTION

Educational establishments can have limited timeframes in which to complete refurbishment projects and new build programmes are often restricted to tight schedules. Choosing a floor that can be installed with minimal disruption can therefore be extremely beneficial.

- ▶ Two-hour cure time, after which the floor is fully functional.
- ▶ Exceptional bond to concrete, steel, tiles and marine ply means we can overlay existing substrates.
- ▶ Flexible working programmes to minimise downtime.

LONG-TERM DURABILITY

Durability, performance and longevity are key considerations when choosing floors. Finding a flooring solution that can withstand the high footfall of a busy educational environment and remain fit for purpose can be challenging.

- ▶ Excellent resistance to physical and chemical attack.
- ▶ Exceptional bond to concrete, steel, tiles and marine ply substrates.
- ▶ Maximum strength and durability offers better lifetime value.
- ▶ MMA resins are UV resistant and do not become brittle with age.

HYGIENIC & SLIP RESISTANT

There has never been a more important time to ensure your school offers the best protection it can. Whilst a floor can be deemed to have little significance, the correct floor combined with an effective cleaning regime can help to support a more hygienic and safer environment.

- ▶ Seamless and monolithic floors, reduce risk of bacteria and are easy to clean and maintain.
- ▶ Exceptional bond to substrates reduces delamination to improve hygiene and reduce trip hazards.
- ▶ Excellent slip resistant ratings, even under wet conditions.

REDUCED MAINTENANCE

Ongoing maintenance costs can drastically increase a products life cycle cost, making them more expensive over time. Maintenance repairs can also disrupt operational processes.

Furthermore, damaged floor finishes can present a trip hazard and therefore reducing risks to staff and students is crucial.

- ▶ Excellent bond to substrates reduces the risk of delamination.
- ▶ Seamless finish reduces weak points and areas that are susceptible to failure such as welded joints or seams.

COMPREHENSIVE CONSULTATIONS

A clear understanding of your specific circumstances, requirements and priorities is vital to identifying the correct flooring solution.

We provide onsite consultations with experienced advisors to enable us to identify the most suitable product and plan around key challenges prior to installation.

- ▶ Floors that are fit for purpose.
- ▶ Accurate quotations and proposals.
- ▶ Realistic installation programmes.
- ▶ Reduced risks of additional costs and onsite delays.

AFTERCARE & SUPPORT

At RESYN we place a strong emphasis on our flooring aftercare service to ensure that we maintain and strengthen relationships with our clients and to maximise the longevity and effectiveness of the floor.

- ▶ Cleaning packages.
- ▶ Cleaning advice and support.
- ▶ Onsite cleaning demonstrations.

TURNKEY FLOORING PACKAGES

Many of our customers prefer the ease of working with one company to coordinate and project manage their schemes. Therefore, RESYN offers comprehensive turnkey solutions. As a result of this, we are able to cater for all flooring and flat roofing requirements including services associated with these works.

Since we take on the responsibility as one package, we can therefore offer seamless delivery and complete projects within specified timeframes.

- ▶ Removal and reinstatement of catering equipment.
- ▶ Removal of existing / defective floor finishes.
- ▶ Overlay of existing floor finishes (subject to condition).
- ▶ Subfloor preparation.
- ▶ Reinstatement of subfloor products, including fast curing underlay screeds and repair mortars and WBP Hardwood Marine Ply.
- ▶ Resin flooring solutions.
- ▶ Drainage solutions.
- ▶ Car park area and line marking solutions.
- ▶ Flat roofing solutions.

RESYN have completed several resin flooring installations at St Edmunds College over the years and they have consistently delivered a high standard of service. When we were looking to upgrade our worn existing floor finishes, they offered sound advice, and the installation team were professional and delivered a good finish on the installation. We would highly recommend RESYN to other educational settings who are looking for durable flooring solutions.
